

# **Monitoring of Bark Beetle Damages in Slovenia - intro**

*Mitja Skudnik, Slovenian Forestry Institute, Slovenia*

*Tatjana Veljanovski, ZRC-SAZU, Slovenia*

*Krištof Oštir, UNI-LJ FGG, Slovenia*

## Affected species:

mostly coniferous: **spruce** (*Picea abies*)  
attacked by eight-toothed bark beetle (*Ips typographus* L.) and **fir** (*Abies alba*).

## Causes and key factors:

1. anthropogenic – historical planting of coniferous outside of their natural habitat
2. natural - climatic factors: extreme weather events + higher temperatures + precipitation distribution
3. **Series of connected events**: planning – big damages - consequence

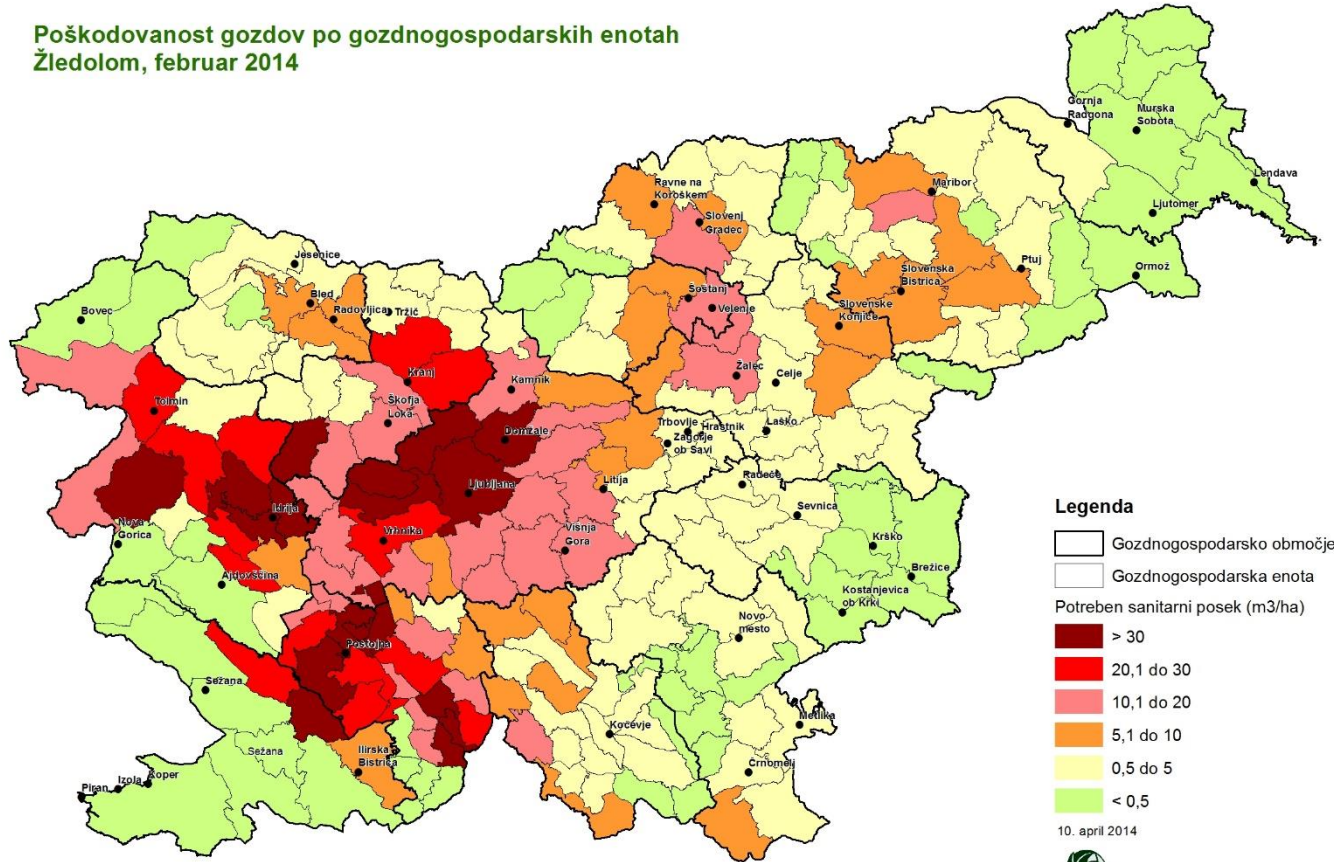

# Timeframe:

Sever sleet (ice rain) damages in 2014 +  
windthrow -> bark beetle damages

Poškodovanost gozdov po gozdnogospodarskih enotah  
Žledolom, februar 2014

## Legenda

Gozdnogospodarsko območje

Gozdnogospodarska enota

Potreben sanitarni posek (m³/ha)

SLOVENIJE

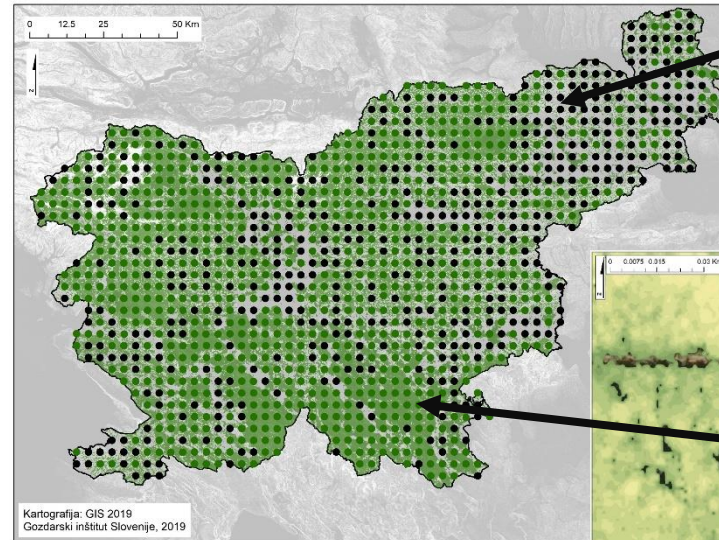

# CURRENT DETECTION and MONITORING:

Field assessment -> ground truth data

1. Public Forest Service -> district foresters
2. National Forest Inventory -> plot inventory

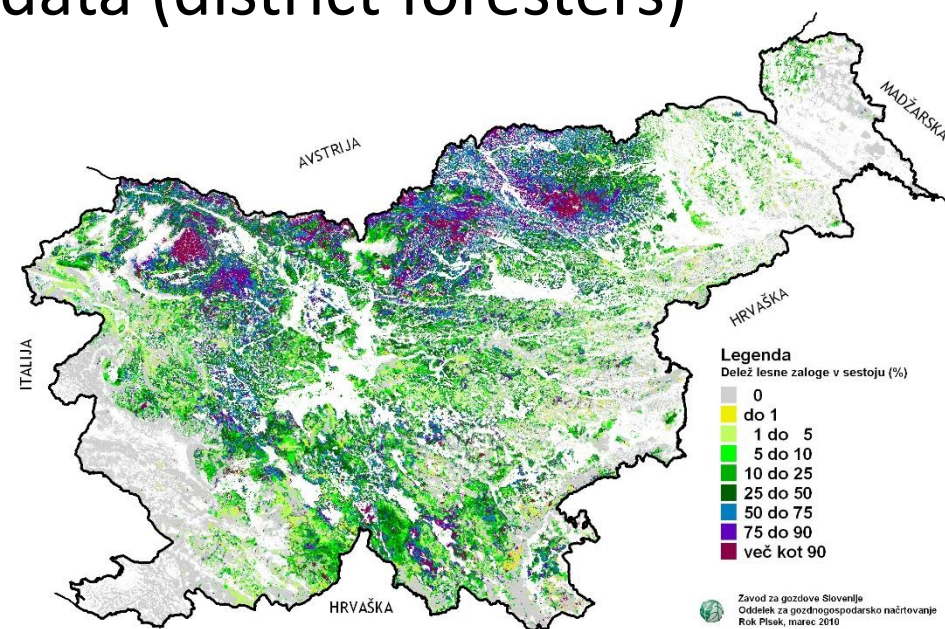

pIID= 473 , 2018

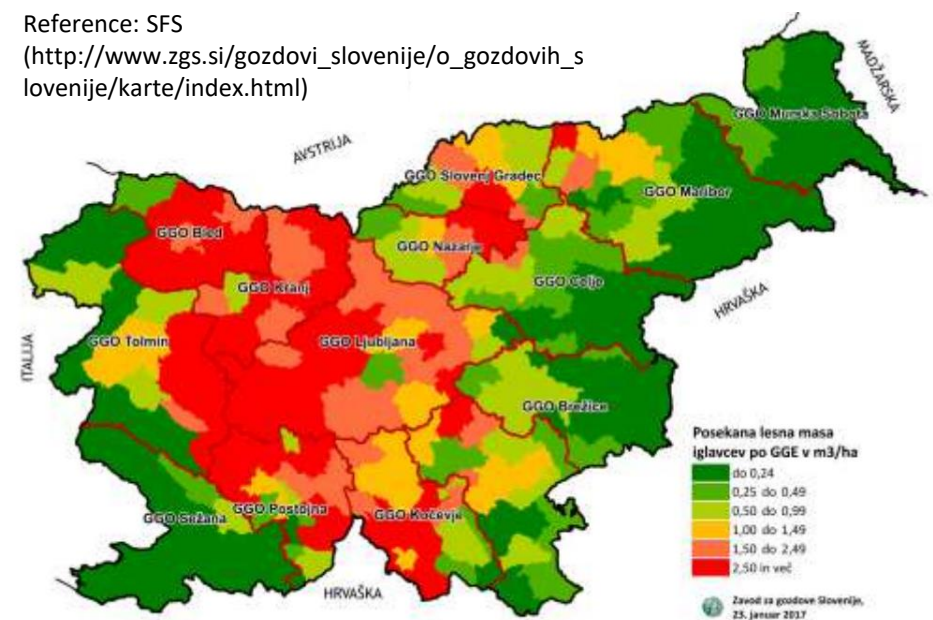

# DETECTION and MONITORING: SFS Timber data (district foresters)

Data source: Timber - podatkovna zbirka o poseku gozdnega drevja. Zavod za gozdove Slovenije, 1995-2019

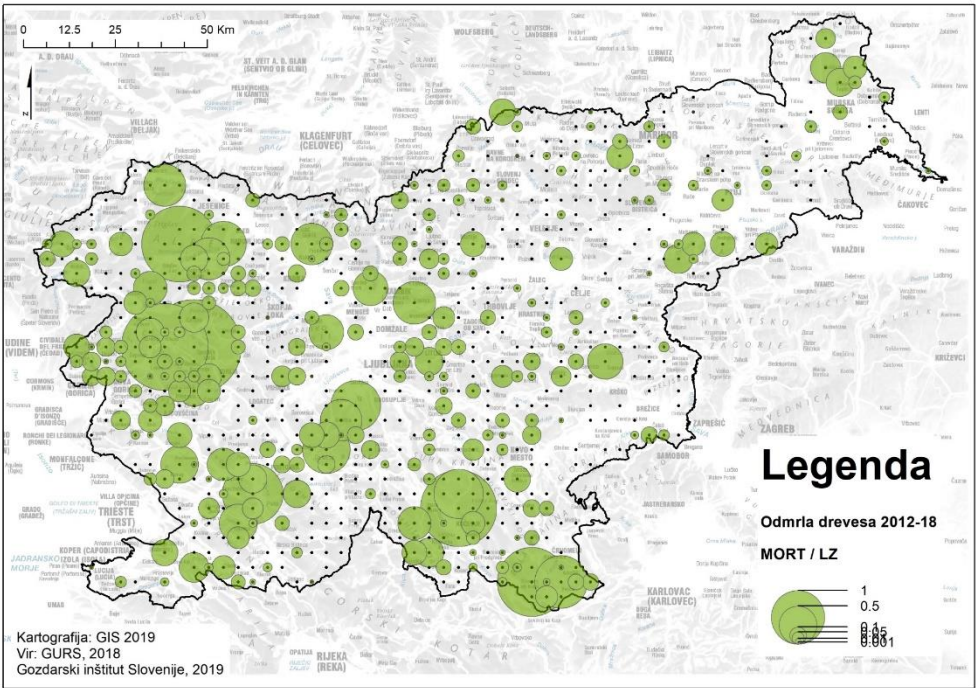

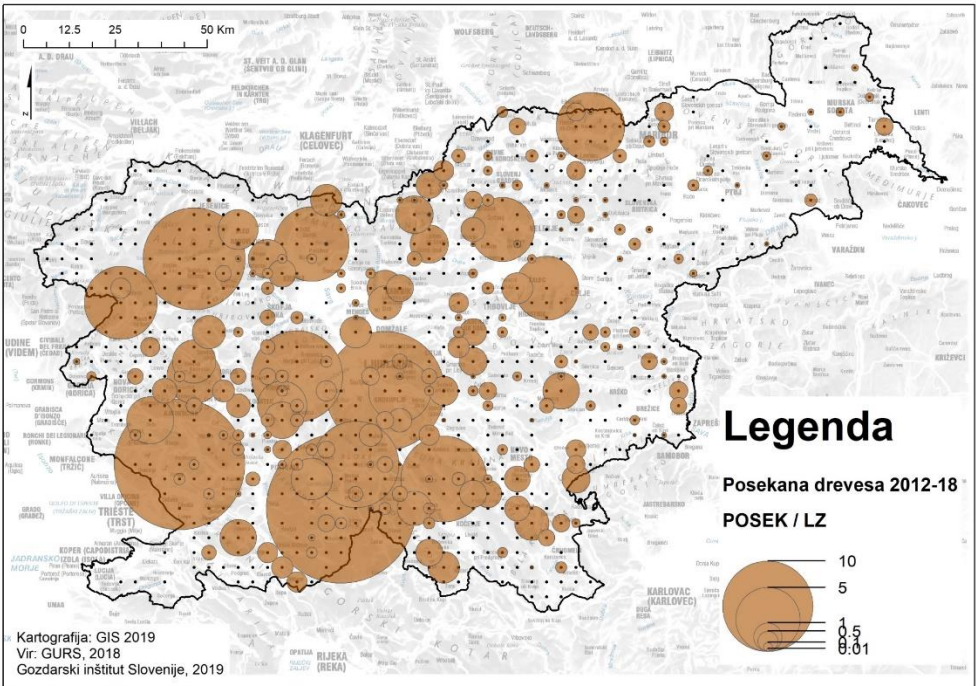

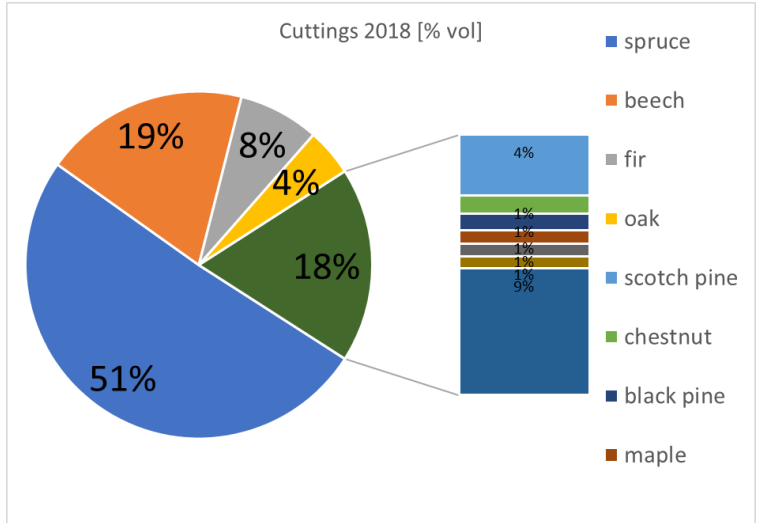

Reference: SFS  
([http://www.zgs.si/gozdovi\\_slovenije/o\\_gozdovih\\_slovenije/karte/index.html](http://www.zgs.si/gozdovi_slovenije/o_gozdovih_slovenije/karte/index.html))

Reference: SFS report on Slovenian forests 2016

# DETECTION and MONITORING: National Forest Inventory 2012-2018 (SFI and SFS)

Logging reason	% of total
Sanitary	50.2
Other	49.8

# Comments on current monitoring

- Damage assessment (sanitary felling) -> ground truth data
    - Only detected/reported felling included
    - Objective methodology
  - Problems with early warnings?
    - Importance of small hot spots
    - Inaccessible areas (Alps)
- > protective forests

# Ongoing research and further information

- Use of UAV and satellite data for early warnings
- Predictions of bark beetle outbreaks
- Problems with spatial and temporal resolution of satellite data + cloud problems

SCERIN -> LISTEN TO (DAY2: January 22, 2021):

1. Maarten de Groot and Nikica Ogris = *Predictive modeling of the first bark-beetle outbreaks and links to remote sensing*
2. Andrej Kobler and Nikica Ogris = *Scaling bark beetle damage from the country- to regional- and local levels*

# Thank you!
